You can assign any keyboard combination to any action (e.g. launching an application, opening a file, calling a command line, and more) and you can select the desired combination from a list of the currently available hotkeys. You can create new actions or edit existing ones; you can also add your own list of keyboard shortcuts or edit the global list. Keymacro features a handy Help dialog which provides detailed information about the various available keyboard shortcuts. In addition, the program also supports the recent and custom lists, which is handy if you have a lot of hotkeys to assign. Moreover, you can store any combination of keys in a list.
