Photoshop is a topic that engenders all sorts of controversy, a subject that can send shivers and SMS messages around the globe, both good and bad. Part of our job is to bring facts and the information you won't find anywhere else. It's a balancing act. You have a point, but you're just not very good at it. I will tell you that it is not a binary decision. If you have ever used it, you'll see that it's a very "KISS" (Keep It Simple, Stupid) program. When it was first released it blew away all of the noise surrounding image editing and photographers, and it's done that every since. It's not a bad thing that they make complicated pieces of software. It just means that you always have to write a book to explain what the bewildering amount of options are. Not to mention the options available to the photo-packaging editor. The reason I am harsh on it is that it's become the de facto reference program for just about every photographer that I meet. From devout old time hobbyists to the most professional of professionals, there is a hard core of "Photoshop Know How" that is interpreted by Lightroom and Photoshop editors and reused. Instead of learning the art of photo-editing from scratch all over again, it's a simple way to find great photographers and get amazing pictures. In this manner, Adobe has made the world of photography much less frustrating. We all know that a picture is worth a thousand words, yet sometimes it takes a more in-depth editing process to get the point across. This implies that you have to talk about your chosen subject matter, and hopefully not much else.

In Figure 15, adobe photoshop Elements is displayed with the color mode "grayscale" and the resolution set to 1200x900 px. "Color mode" is a parameter that allows the users to choose between black and white, sepia, or color. "Resolution" parameter sets the resolution of the image to a specific value, and the user can adjust the resolution. Quality and contrast are also set to medium. The information is displayed at the bottom of the dialog box. The process of changing of the Photo Effects type to vignettes is almost similar to the changes in the adjustment layers. After clicking on the main window, the page will display a dialog box where the user can adjust the displayed parameters. The parameters present are shown below in Figure 16.
